

To Community Affairs Committee
Responses To Lockhart Review
Department of the Senate
Parliament House
Canberra,

I hereby urge the total opposition to allowing human cloning and the creation of human life purely for the use in experiments and research as recommended by the Lockhart Review Committee.

Embryonic stem cell research involves creating and destroying live human embryos.

This use, for whatever spurious reason, is not just unethical, it is iniquitous to tamper with human life in this manner.

For the sake of our nation, indeed, for the sake of human society, we ought not permit this to happen.

Yours faithfully,

Ron Angus.
