618 Asbestos (TOOCS2)		np		np	30	60	85	105
619 Other non-metallic minerals and substances	130	145	95	130	130	145	140	135

The National Workers' Compensation Statistics database (NDS) is comprised of accepted claims for workers' compensation made under the Commonwealth, State and Territory workers' compensation Acts which resulted in a fatality, permanent disability or a temporary disability resulting in an absence from work of one week or more (based on an employees normal working week). Please note that 03/04 data is

preliminary and subject to change.

This data has been adjusted to ensure adherence to ASCC confidentiality practices. This includes the suppression of cell values less than 6 (replaced with 'np' = not publishable) and rounding to the nearest 5 has been applied to all individual cell values to ensure that confidential information about employers and employees is protected. For this reason differences may occur between the totals and the sum of the row and column values. Fatalities are not treated as confidential since, by agreement with the data suppliers, this information is a matter of public record.
