

The following summary no cost proposals were put to the 2020 summit

Communities and Families

Instead of distributing money for community and family infrastructure top down provide individual community members with the money and require the money be spent on designated community services or infrastructure under the control of the community members.

Indigenous Australia

Same as Communities and Families. That is the approach is no different - but the amount per person may be different.

The details of how this method of distribution of funds to communities will work will depend on the community and the community facilities being addressed. The critical factor is to give people the choice and control of developing community facilities but enable governments to keep track of the money spent and see that it spent on the infrastructure intended to provide community services.

If the committee is interested in the idea then they could give me a community service to provide for a specific community and I will detail how it would be implemented.
