

Hello I am a concerned citizen i think the government needs to pass this bill for clear labelling of ingredients apart from the fact that it is killing off another species of animal on our planet we have a right to know what all the ingredients are that go in our food our future depends on it there is already too many people dying of cancer nowadays and that is largely due to the food we are eating if you can regulate the food industry better by displaying the foods ingredients then they can't get away with putting poison in our foods and the food codes system needs to go as well if they run out of room on the ingredients list then they will be more careful of what they put in their food

Many thanks
Julie Morris
