

re: Food Standards Amendment (Truth in Labelling – Palm Oil) Bill 2009

As consumers we are given so little choice in both how and where our food is produced but often what is in it. I am a health conscious individual and I like to know what I am eating. I also disagree with the destruction of the environment for the orangutans for the production of palm oil, when there are so many different available alternatives.

We are committed to being carbon netural, we are experiencing price rises in our electricity to compensate for this, I use "green energy" as it is, I feel that the labelling of palm oil will again allow me to make the choice not to consume palm oil or contribute to the destruction of the environment.

Please allow for us to make the choice

Thank you for your time

Miss Katrina Boyle
