

To Senators on the Senate Select Committee on Climate Policy,

\$42B is being spent on "The Economy". \$25B is going on new submarines. The Victorian govt intends to spend \$38B on improved traffic and transport.

\$50B WOULD BE SUFFICIENT TO GET RID OF EVERY COAL FIRED POWER STATION IN THE COUNTRY!!!

Do your sums, and stop tiptoeing around this problem. We use approximately 50GW of power in Australia, and currently, wind turbines cost around \$1 per W. If you put 50GW of generation in the Great Australian Bight (\$50B), with some simple storage measures for when the wind is low, you would power the entire country easily.

WHAT ARE YOU WAITING FOR? REDIRECT THE \$42B NOW!

Name: Karl Grimm
