

To Senators on the Senate Select Committee on Climate Policy,

Its simple:

CPRS:

Cease logging in native forests result = %5

Make State Transport (buses etc) compulsory in the cities, more park and ride facilities.= less cars=more oxygen levels = 5% at least.

so thats 10%

It is possible that these emission cuts can be attained next week let alone 2020

What is the holdup?

Too much chatting and feathering nests, promoting warfare and wasting money on non essentials is our planets problem. it is the ego of the human in power that is holding up changes required. Meanwhile suffering is deferred to another time and place, for our children grandchildren and greatgrandchildren to deal with.

Emissions trading is one of many important tools the government can use to reduce Australia's emissions. By setting a strong target and sending a price signal to the market, a well-designed scheme should help dramatically reduce Australia's emissions at the least cost to the economy and make sure Australia does its fair share to tackle climate change.

Please look at the science of this situation, not the politics. Listen to the experts who offer their advice to you during this inquiry, listen to the people of Australia and make the right decision in your recommendations.

Australia needs a strong, ambitious and fair emissions trading scheme, not a plan that protects polluters and stands in the way of the change we need.

AUSTRALIA NEEDS STRONG FAIR LEADERSHIP FOCUSED ON THE FUTURE HOLISTIC
HEALTH OF THE PLANET AND ITS PEOPLE
