

To Senators on the Senate Select Committee on Climate Policy,

I voted for Labor and Kevin Rudd because I wanted to believe that he was going to do something worthwhile for the climate and the Earth. Please note that I am not normally a Liberal or Labor party voter.

I have been saving for years now to be able to set up PV power generation for my house and intended to back it up with a small wind turbine. After the release of the piss-ant emissions targets am seriously considering doing something else with my money as my carbon savings are just going to be sold or given to one of the major polluters so that they can carry on business as normal.

I am totally dismayed that the Rudd Government has jumped into the pockets of corporate polluters.

Name: Julie
