

To Senators on the Senate Select Committee on Climate Policy,

The atmosphere consists of 0.054% carbon dioxide - all produced by plants and animals and volcanoes, as it has been for eons. An immeasurable amount is produced by man - so stop the crap about the Greenhoax Effect. The Ozone hole at the South Pole has occurred EVERY winter since creation. Wanna be famous ??? Discover one at the North Pole too. !!! Sunlight on the upper ionosphere turns O₂ into O₃ - in winter ! So, no sunlight = no ozone. Please present this info to parliament Perhaps you'll be out of a job if this info is made know

Name: Romel
