

To Senators on the Senate Select Committee on Climate Policy,

Thanks for the opportunity to participate. I have tried to follow trade emissions trading and fail to find the credibility of one company buying credits off another that will reduce carbon polluting. I feel it would be more beneficial if Government legislated and subscribed to, that no building be erected without producing solar electricity. This was proven in Brisbane in 1998 by offering solar panels to the public at a reduced rate proving it was people friendly and oversubscribed in under 1 day. It has been stated that over 700,000 people die every year through carbon poisoning in China.

Name: LIONEL IRWIN
