

To the senate inquiry into the solar power feed in tariff

As our company is new to the solar PV grid connect industry, we feel the real need for a GROSS feed in tariff.

Our company needs to be able to show interested parties that by installing solar power they will have a payback period of eg. 10 years or less.

The feed in Tariff needs to be available to all sectors and uncapped so that anyone who is interested in doing something for the environment can.

Climate change is the hot topic and without a Gross, uncapped feed in Tariff the industry will not grow and we will never get to our renewable energy targets.

Remembering when the Mums and Dads install solar power, the flow on effect is that they save energy by implementing all sorts of energy saving solutions.

Regards

Peter
