

To: Economics, Committee (SEN)
Subject: Solar rebates / credits

To whom it may concern,

The current situation with rebates / ,RECs credit etc is not satisfactory. As a small business operator I find the uncertainty for customers is an unsatisfactory situation. We need some displayed leadership & general clarity in the regulations so people can make plans & decisions based on precise rules & guidelines. This situation is not difficult to rectify compared to some of the other climate related problems & challenges around.

Please get on with it so we can too. I am not interested in the politics of this at all but will comment that in my opinion inaction is political poison.

Kind Regards,

Mark England
