Dear Senators,

We have been trying to find out about installing solar PV panels to help electricity generation in a small domestic way. But nobody can tell us what the rules will be from July 1st. !!!

With the rebate scheme scrapped, and no viable option set up, we have nowhere to go.

This is very disappointing, especially in view of the Commonwealth Government's verbal commitment to green energy schemes.

We have no idea whether the Bill will be passed after it has been hitched to the highly problematic Emissions Trading Scheme (ETS) legislation, whether the solar credits scheme will actually backdate rebates and what the price of REC's will be if and when the legislation is passed.

Please expedite the design, and approval of a scheme that will work, enabling thousands of householders to contribute to power generation and the reduction of greenhouse gasses.

Sincerely,
Rob & Sandra Willis-Jones
