To Whom It May Concern

Could something please be done regarding the solar industry and the consumer in the form of support to householders to purchase solar panels.

THE old scheme was scrapped early and I was away and unable to put in my application. I felt this was really unfair and the only way we can reduce emissions and help our planet is to use solar power.

I ask that you look at some new system and put it in place or bring back the old one.

Let us take politics out of this and help each other towards a better future.

Sincerely,
Chris Wildman
