What is the government and opposition doing about solar energy? It should be available still to homeowners as well as to the lower income families , pensioners( needing more help than most) and businesses. The rebate scheme should also be pushed through parliament. How many more promises are to be broken by the current government and fought for by the opposition? Renewable energy is necessary for the good of our planet. Are we going to ignore our environment as we are currently doing to our native wildlife? Wake up all you politicians of all persuasions put your money where your mouth is.

A very concerned voter.
