
gement Bill 2005

I am appalled at the idea of a nuclear WASTE facility being considered in the NT, despite the criticism of the Bills Committee, the lack of consultation with the historic caretakers of the land, and also despite an earlier federal assurance that no dump would be imposed.

I may not be an expert on the facts and figures involved, yet I am confident that creating a waste dump that may need to be monitored continually for an indefinite future period is not a good thing to leave our children and their children to manage.

We as a nation are fumbling headlong into the 21st century, apparently blinded by short returns and capital made on the quick and dirty. We should instead be pioneering the way forward in sustainable, green energy sources for the future, not shackling ourselves to an immature and potentially self destructive course.

sincerely,
Eric Myhill
