

Hello

My company uses Open-source software in the Animation industry, and if the

US-AU fta comes ahead, It will effectively kill our company, Not only does

Microsoft (the only alternative) not have the stability/security or features required for our setup, the coast to re-implement a poorer alternative will cost this company an arm and a leg, but also cause our company to loose it's little profit as it is.

Below is some information as to why the FTA is bad.
