

Dear Sir,

I am against the building of the Traveston dam, for many reasons. The lung fish is a special fish that must be preserved, not forced into extinction when the river runs low. Also the Mary River turtle and cod must not be endangered. When the river is low it is ideal for breeding mozzies at the edges, and grows algae, and the fishes' feeding grounds under the mangroves are destroyed. We are supposed to value these eco systems and look after them under Preservation acts.

It is not a just government to force people off their land they may have worked for generations and deny their children their heritage. It is a dictatorship, we have gone backwards to the days of tyrants. One day it may be your land they are taking. Please do not let the dam go ahead, look at history, disasters everywhere, due to mans' lack of common sense.

Sincerely

S. Weymiens. Unit 2/15
