

I would like to see the following:

1. A fast train link to the airport possibly taking out two lanes and replacing them with rail lines.
2. I would like the State to invest in more underground systems which are resistant to heat and would protect the environment.
3. No more new roads, the last road East Link has I understand been a financial disaster....no more roads
4. Fast rail to NSW and the Sunshine Coast so that holiday makers are not forced to use Planes.
5. Daily service to Adelaide.
6. A rail network which is a ring around the whole of Melbourne like the roads, so that it is possible for people to get to most places on public transport, with a maximum walking distance of 15 minutes.
7. Rail links from New Towns like Cranbourne so that car drivers no longer have to sit daily on the carpark that is the SE freeway burning fossil fuels. Same goes for people North of the City.
8. Follow the initiatives of the London Underground and Paris Metro as examples of how intercity trains connect with small regional trains.
9. Rather than spending money on a wheel which flashed coloured lights at night and does not work in the centre of the city, copying Manchester and London seemingly as symbols of having had an international sporting event there, why not make something real and with longevity rather than the current preference for folly's ( a folly is something which is made for the fun of the maker without any real purpose\_

Please spend the money of the tax payers of this state for our future.

Please integrate these actions in your plans

Kind Regards  
Sue King
